
General Operating Rules GBC Bucket Crusher

- Look for metal in the material before crushing.
- Reduction rate of the material going into the opening should not exceed 1:6 relative to the final product.
- Material of average hardness should be no more than 30% of the bucket opening length.
- Do not grind flammable materials, explosives, or products that create flammable powders or are toxic.
- Do not compress material with the bucket crusher.
- Do not use the bucket crusher to break stones or larger material.
- Do not use the bucket crusher as an excavator bucket.
- Do not distribute material sideways or in reverse.
- Do not lean the excavator on the bucket crusher.
- Do not use the bucket crusher to prop up and move or turn the excavator in any direction.
- Do not hit or push the bucket crusher on the ground.
- Do not use the bucket crusher to rip objects from the ground or material from hard stones or rocks.
