
General Operating Rules GBS Bucket Screener

- Do not compress material with the bucket screener.
- Do not use the bucket screener to break stones or larger material.
- Do not use the bucket screener as an excavator bucket.
- Do not distribute material sideways or in reverse.
- Do not lean the excavator on the bucket screener.
- Do not use the bucket screener to prop up and move or turn the excavator.
- Do not push or hit the bucket screener on the ground.
- Do not use the bucket screener to rip objects from the ground or to rip material from hard stones or rocks.
- Do not use the bucket screener to clear or level the site.
- For continuous screening and best performance fill the screener drum to 30% of the total capacity.
- The best screening position is 45° to the horizontal surface.
- Never screen flammable materials, explosives, or products that create flammable power or toxic or harmful substances.
- Never use the screener for non-screenable materials (humid materials, damp materials, wood, etc.).
