

GLG-2[®] Extreme-Pressure Lithium Grease

Using the correct grease is critical!

Genesis now stocks GLG-2[®], an anti-wear, extreme-pressure lithium grease recommended for all Genesis attachments.

Providing increased wear resistance and high load-carrying capacity under high, constant and intermittent stress, premium GLG-2[®] grease does not contain Molybdenum Disulfide (Moly), which causes gumming, inadequate greasing and premature component failure and should never be used to grease any attachment component.

GLG-2[®] also adds another layer of protection to your attachments and extends the life of all rotating parts with its treatment for increased boundary film protection.

GLG-2[®] is recommended for all temperature conditions and available in a case of 10 14-ounce tubes, PN 6302601, or 40 tubes, PN 6302602.
