

TIM'S TECH TIPS

Excavator Standard Plumbing Practices

Genesis attachments are designed to fit and operate on essentially any excavator brand, and excavator preparation prior to attachment delivery makes installation safer and easier.

The specific preparation required, of course, varies by excavator manufacturer, so to help simplify the process, we have created Standard Plumbing Practices Maintenance Minutes for [Komatsu](#), [Kobelco](#), [John Deere-Hitachi](#), and [Caterpillar](#).

Each document covers the proper plumbing procedures for that brand's jaw open/close summation, rotation plumbing and case drain, if applicable.

In addition to Standard Plumbing Practices, our [Maintenance Minutes web page](#) also contains other helpful documents including bolt torque specifications, hydraulic requirements, product daily maintenance, build-up and hard-surfacing, and troubleshooting guides.

If you have questions on excavator plumbing requirements or other service topics, contact Tim at 218-349-5755, talseth@genesisattachments.com, or Loren at 715-919-8316, llagesse@genesisattachments.com.
